

Michael Knyazev

Software Developer

Profile

Software Engineer with a 10+ years of experience working in the internet industry. Skilled in Go, C++, JS, Software Architecture and DevOps. Passionate about coding pet-projects in my free time. Father of wonderful son and adorable daughter.

Employment History

Engineering Lead at DestraLegal, Moscow

October 2018

Started as a dream of an actually working Russian Legal-Tech solution, I designed and MVP'ed the low-code platform for lawyers, allowing them to create dynamic content. Using that platform, we have created one of the first Legal-Tech Russian cloud service and raised over \$1mil. From the start, my main responsibility has been all of the IT aspects of our project including development management, system infrastructure maintenance and ensuring service stability. Our main stack is ReactJS, NodeJS, MongoDB, and Go. We use Grafana and Prometheus for system monitoring.

Lead Software Architect at Zephyr Lab, Moscow

February 2019 — December 2019

Started first as freelance work, but my relationship with Zephyr Lab quickly escalated to part-time Software Architecture consultant. During my work, I designed and MVP'ed an engine for a content builder cloud service. That engine allowed the company to create a couple new services using same mechanic - a presentation builder project, and a personalized children's fairy tale generator.

Senior Software Engineer at Tooligram Software, Moscow

November 2014 — January 2017

After my long journey in IT outsourcing, I decided to try being a part of a startup. During my work in Tooligram, I was responsible for developing and maintaining the web-app. In addition to maintaining our Linux servers, I created the first cloud version of software using PHP and JavaScript for the main web-app, and C++ for the background daemon.

Software Engineer at King-Bird Studio, Moscow

June 2014 — October 2014

Worked on many websites and cloud projects, mostly as Full Stack developer, using PHP/NodeJS for Backend, and JavaScript (AngularJS) for Frontend. I maintained most of Linux servers that company had.

Software Engineer at Prof-Media Holding, Moscow

October 2013 — June 2014

During my work at TV-3 federal channel, which is part of Prof-Media Holding, I created a new version of the channel's official website with PHP and JavaScript.
